

## Maintenance & Care Guide

Simple advice on how to keep your Easigrass™ looking fantastic for years to come

### Furniture

The use of Garden Furniture, Trampolines and Swimming/Paddling Pools is safe on Easigrass™ however we recommend the following guidelines:

- Do not place garden furniture with sharp, thin metal or thin pointed legs onto Easigrass™ as this increases the risk of piercing and damage.
- Regularly move garden furniture around the area preventing crushing and pressure marks.
- The above guidelines also apply for Trampolines which we recommend moving around the area to also prevent crushing and pressure marks.
- Swimming and paddling pools present a potential risk with the refraction of Ultra Violet Light through the water which can burn the Easigrass™ product directly beneath.
- The above Ultra Violet Light risk also applies to mirrors, water features and UV reflective glass.

### Miscellaneous

- The use of a vacuum cleaner is not recommended as this will remove sand infill.
- BBQ's present a potential heat damage risk to the product so they are not recommended to be used directly on top of the area.
- Do not use bleach and/or non-Easigrass™ recommended products and cleaners.
- The use of a power washer and/or power hose is not recommended.

### General Dirt

The removal of general dirt is achieved by using a stiff yard brush along with warm water and a mild detergent in a watering can and/or bucket.

### Weeds & Moss

- Easily controlled as long as it is treated regularly.
- Weed and moss growth needs to be treated with a product recommended by Easigrass™.
- DIY outlets, builder's merchants and hardware stores stock a range of weed and moss control products. Always take care to follow the manufacturer's instructions and seek the approval from Easigrass™ before proceeding.

### Pets

- Easigrass™ is 100% pet friendly however we recommend you follow some simple maintenance guidelines.
- Use a stiff yard brush to remove any pet hair which builds on the area.
  - Heavy use for urine is not recommended however for light use we recommend treating affected areas with our specialist Easi-Pong product which will remove any smells and bacteria.
  - Defecation should be treated equally the same as with natural grass and removed with an implement that will not damage Easigrass™. As with urine we recommend treating affected areas with our specialist Easi-Pong product.
